

Retail Business Performance Analysis

Power BI · Power Query · DAX · Data Cleaning · Data Analysis · Data Visualization · Dashboard Development

Project Overview

Project Context

Retail sales transaction data needed to be cleaned, transformed, and analyzed to evaluate business performance, product profitability, customer behaviour, regional performance, and sales trends.

Primary Goal

Analyze retail sales data to uncover actionable insights that support business decision-making and improve sales and profitability.

Data Foundation

Leverage Power BI, Power Query, and DAX to clean, transform, analyze, and visualize retail transaction data across products, categories, customers, regions, and time periods.

Key Deliverables

Identify sales and profit patterns, top-performing and underperforming products, customer and regional trends, and the impact of discounts to provide data-driven business recommendations.

OVERALL BUSINESS PERFORMANCE

Total Sales
Rp1M

Total Profit
Rp1,80M

Profit Margin
158,99%

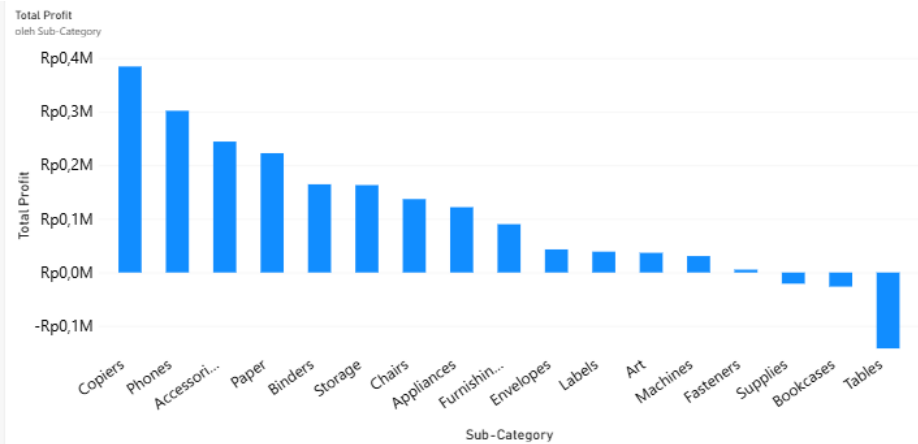

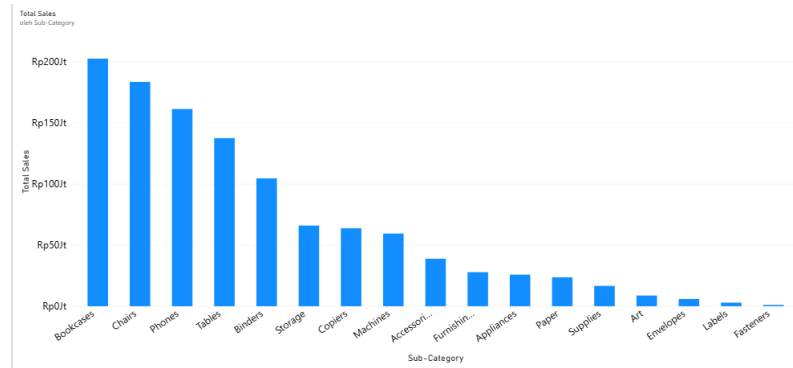

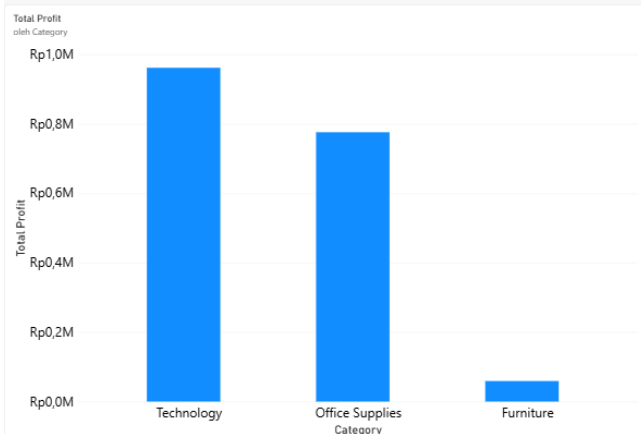

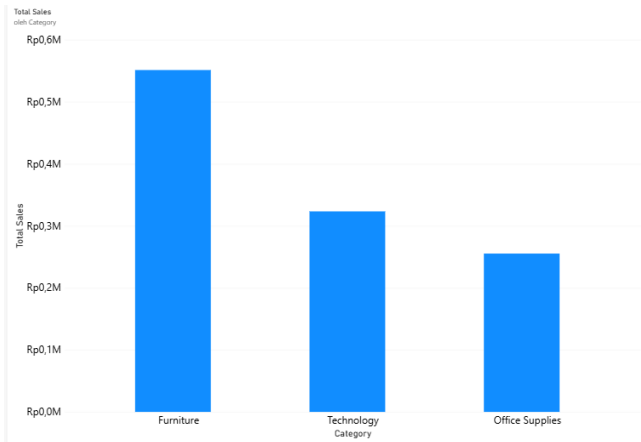

Total Orders
5Rb

Total Customers
793

Overall Performance

The business generated strong overall sales performance, with total sales reaching 1M and total profit of 1,80M. The resulting profit margin of 158,99% provides an overview of the business's overall profitability.

PRODUCT ANALYSIS

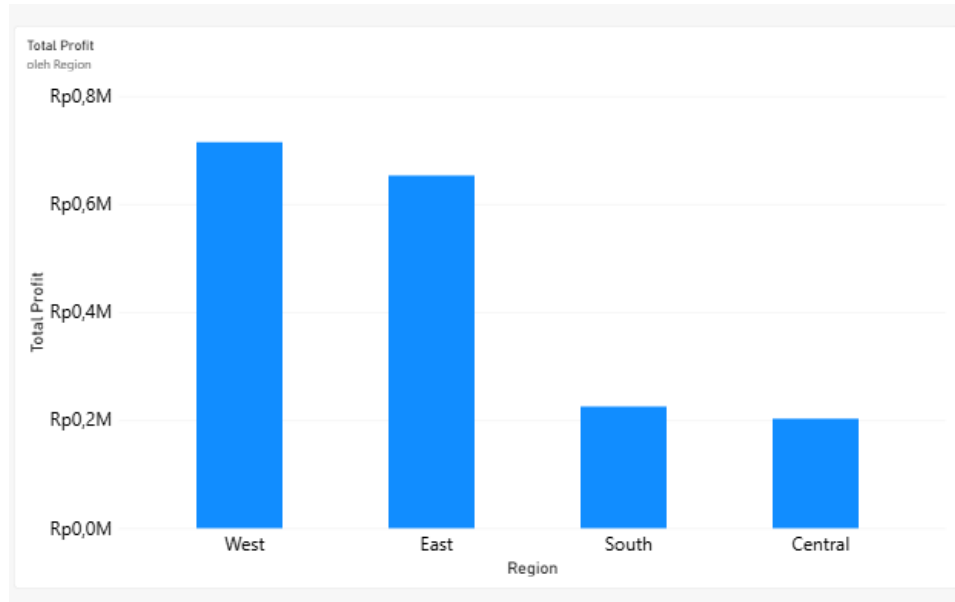

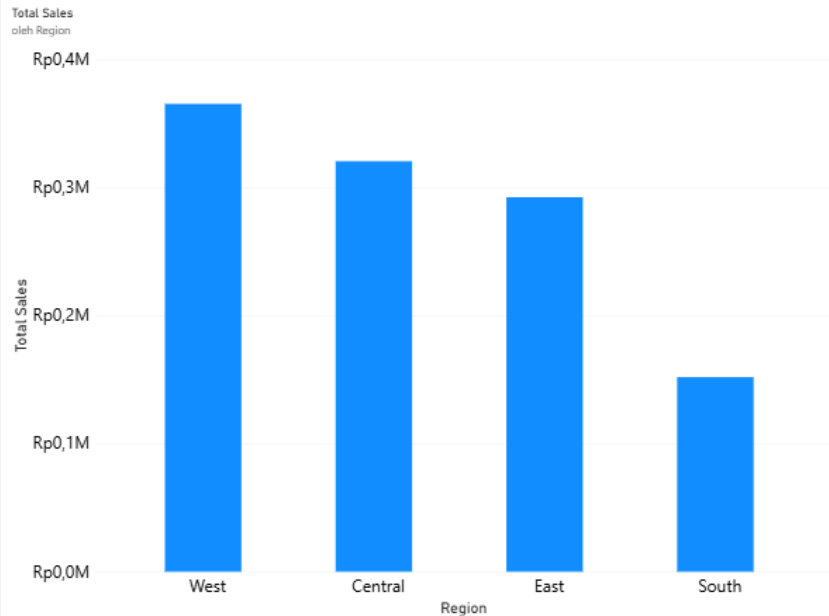

Highest Sales, Furniture is the category with the highest sales, with Bookcases as the top-performing sub-category.

Highest Profit, Technology is the category with the highest profit, with Copiers as the most profitable sub-category.

Key Insight, Furniture leads in sales, while Technology leads in profit, showing that higher sales do not necessarily result in higher profitability.

Geographic Analysis

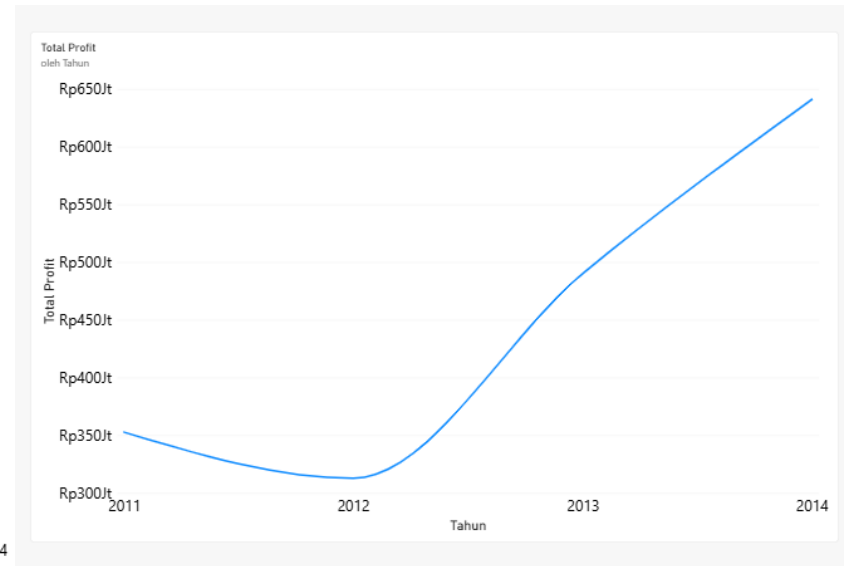

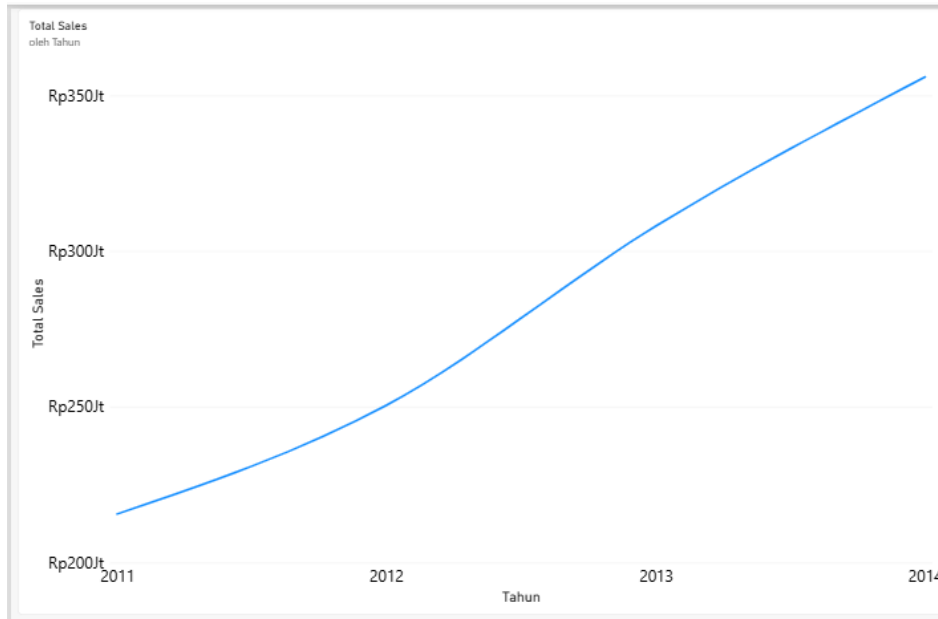

Highest Sales, The West region generates the highest sales compared to all other regions.

Highest Profit, The West region also generates the highest profit compared to all other regions.

Key Insight, The West region demonstrates strong performance by achieving the highest sales and profit. This indicates that the high level of sales activity in the West is also accompanied by strong profitability.

Time Analysis

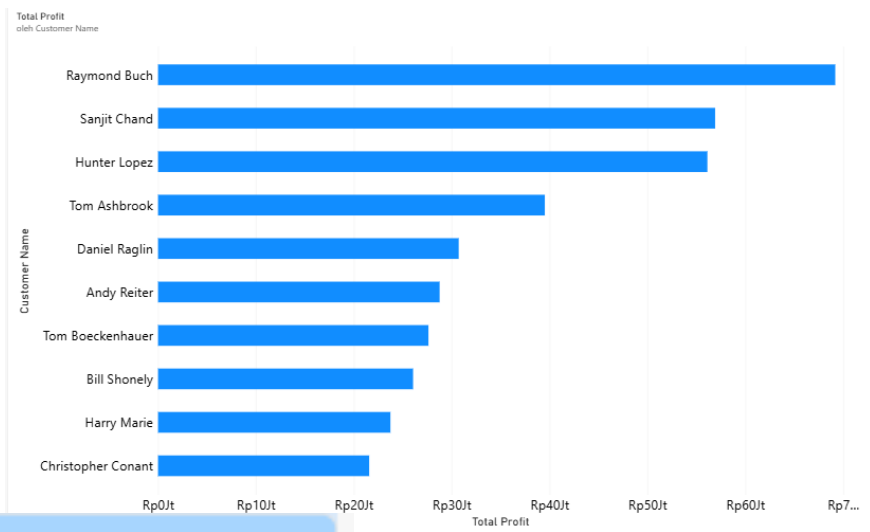

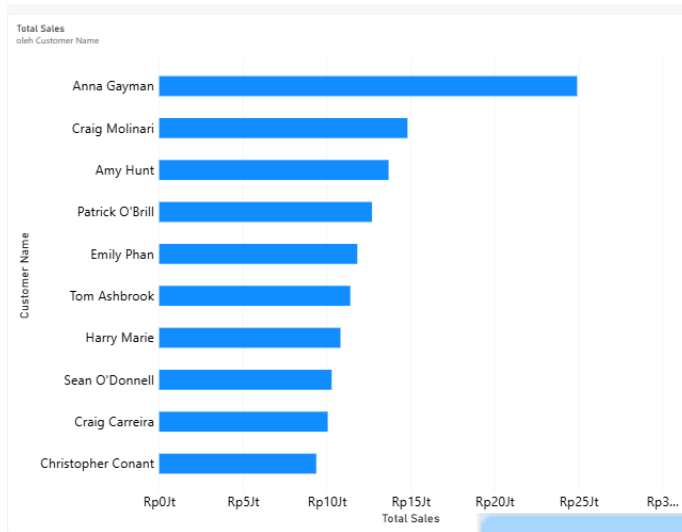

Sales Trend, Total sales show an increasing trend over the years, with sales continuing to grow over time.

Profit Trend, Profit shows a slightly different pattern. Profit experienced a decline in 2012, but recovered after 2012 and continued to increase in the following years.

Insight, Sales shows relatively consistent growth, whereas profit experienced a decline in 2012 before increasing again. This indicates that sales growth is not always directly accompanied by profit growth, so changes in profitability need to be monitored even as sales continue to rise. Overall, both sales and profit display a positive long-term trend.

Customer Analysis

Total Customers
793

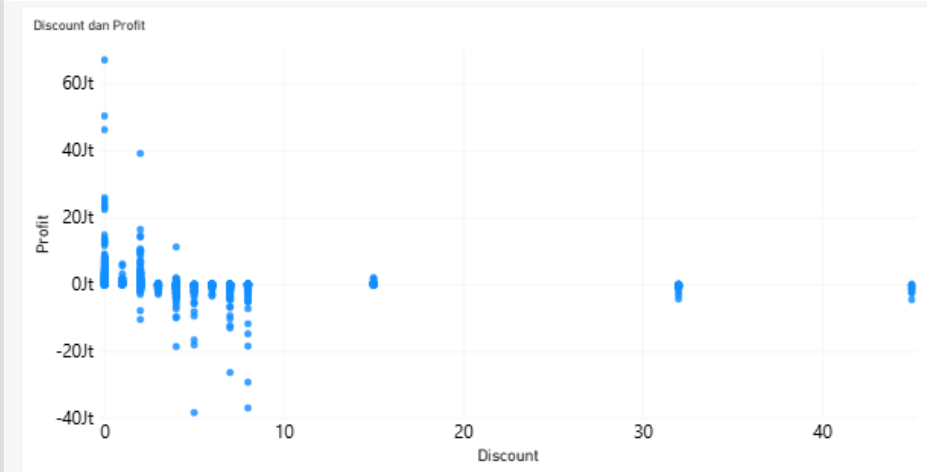

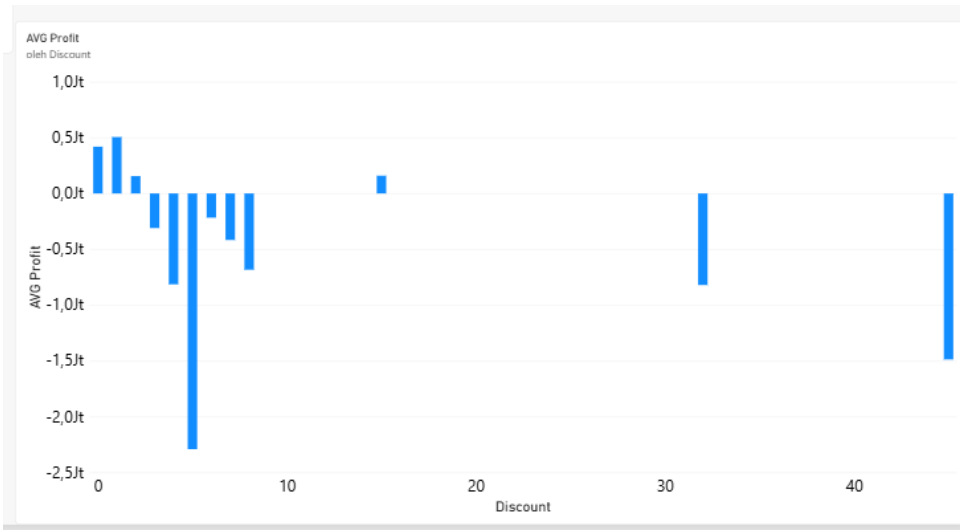

Total Customers, There are 793 customers in the analyzed dataset.

Highest Sales by Customer, Anna Geyman is the customer with the highest total sales.

Highest Profit by Customer, Reymon Brunch is the customer with the highest total profit.

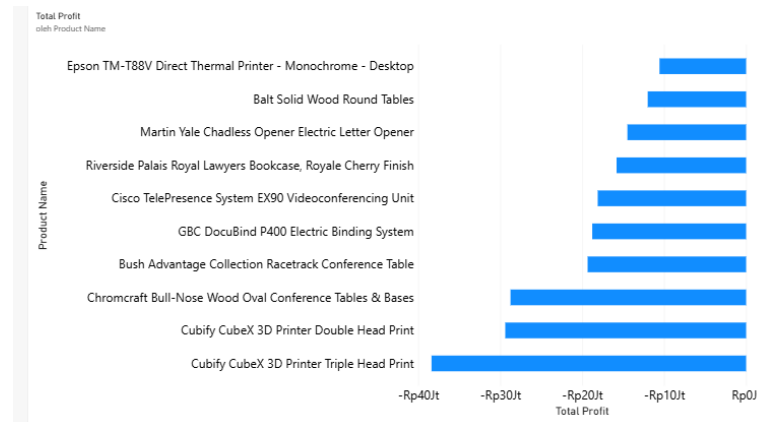

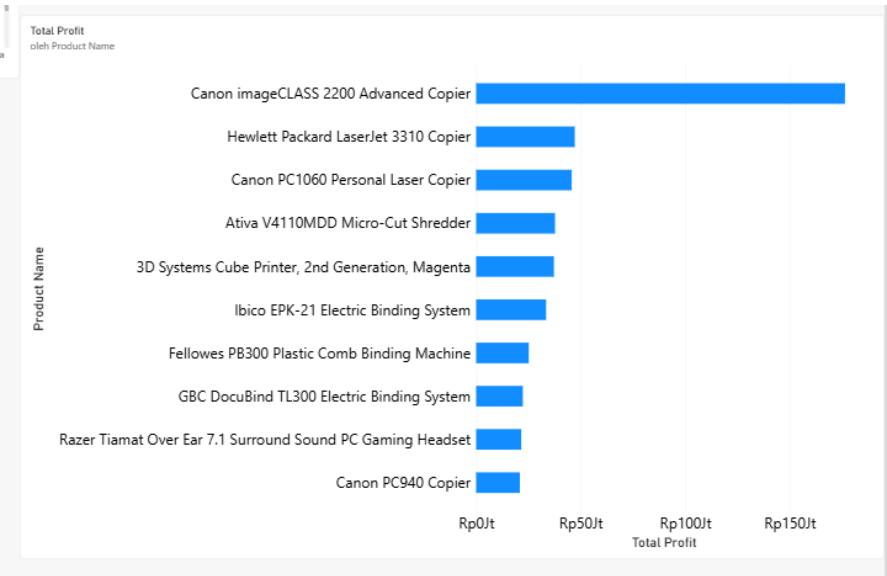

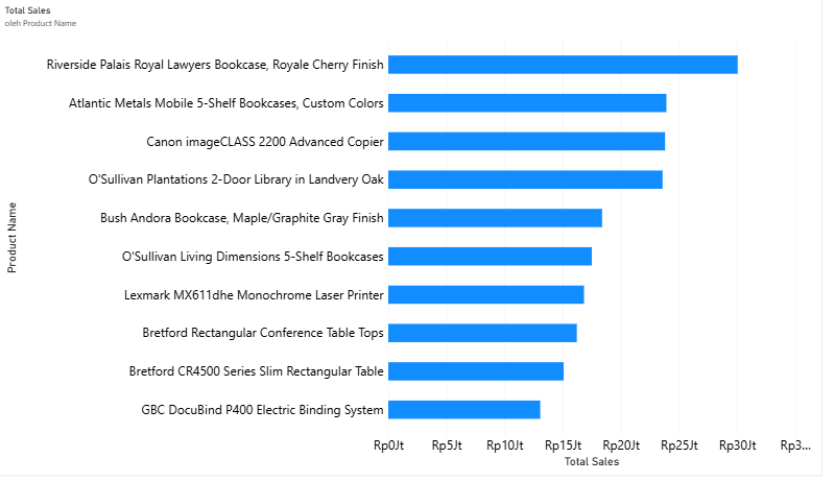

Key Insights, Anna Geyman provides the largest sales contribution, whereas Reymon Brunch generates the highest profit. This indicates that the customer with the highest sales is not always the one who generates the highest profit.

Discount Analysis

Higher discount levels tend to be associated with lower profit, with several high-discount transactions resulting in negative profit. This suggests that excessive discounts may reduce profitability and should be carefully managed.

Product Performance

Highest Sales, Riverside Palais Royal Lawyers Bookcase, Royal Cherry Finish is the product with the highest total sales.

Highest Profit, Canon ImageCLASS 2200 Advanced Copier is the product with the highest total profit.

Highest Loss, Cubify CubeX 3D Printer Triple Head Print is the product with the largest loss.

Key Insight, The product with the highest sales does not always yield the highest profit. Additionally, there are products generating significant losses, indicating that an evaluation of product pricing, discounts, and costs should be considered to improve profitability.

Bussines Recomendation

1. Optimize Discount Strategy

Evaluate and control high discount levels, as higher discounts tend to be associated with lower profit.

Discount promotions should be applied selectively to maintain profitability.

2. Focus on Profitable Products

Prioritize products and categories that generate strong profit while reviewing products with low or negative profitability to improve overall business performance.

3. Strengthen Regional Performance

Maintain the strong performance of the West region while identifying opportunities to improve sales and profitability in other regions.

4. Evaluate Customers Based on Profitability

Identify and retain customers who contribute high profit, rather than evaluating customer value based on sales alone.

5. Monitor Sales and Profit Trends

Continue monitoring sales and profit performance over time to identify changes in business performance and respond to potential declines in profitability.

Conclusion

The analysis shows that the business has a positive overall performance, with sales and profit generally showing an increasing trend over time. Product, regional, and customer analysis also revealed differences in sales and profitability, highlighting that high sales do not always translate into the highest profit.

The West region demonstrated the strongest overall performance, while Furniture led in sales and Technology generated the highest profit. The analysis also indicates that higher discount levels tend to be associated with lower profitability, while some products generate significant losses.

Overall, the findings highlight the importance of balancing sales growth with profitability. By optimizing discount strategies, focusing on profitable products and customers, and continuously monitoring business performance, the company can support more effective and data-driven decision-making.
